FOR IMMEDIATE RELEASE

NEW HYPOXIA AWARENESS TRAINING AT FACTS® TRAINING PROGRAMS

FACTS Training, an AirCare Solutions Group company, recently announced a significant expansion of the Decompression module in the FACTS® emergency procedures training programs for corporate crewmembers. Added to all training locations, the Reduced Oxygen Breathing Device (ROBD) provides crewmembers with the opportunity to experience hypoxia in a controlled and monitored environment. Hypoxia awareness can be a life saving experience that 92% of all crews surveyed agreed needs to be included in all emergency training programs.

Rather than physically exposing a subject to lower total pressure in a decompression chamber, crewmembers can experience the effects of hypoxia at FACTS Training programs using a system that changes the composition of the gas mixture inhaled. The FACTS ROBD™ is the only hypoxia awareness tool readily available to corporate pilots and flight attendants without the risks involved in using a decompression chamber. The ROBD, used in combination with the FACTS simulators, enhances the realism of decompression training.

“Having always been the leader in corporate aircrew emergency training, our goal is to always be the frontrunner in providing new and challenging training experiences for corporate pilots and flight attendants”, said Doug Mykol, CEO, of the AirCare Solutions Group. He went on to say, “Our trainers, our full-motion simulators, and our leading edge training devices all combine to provide a realism in training unavailable anywhere else. ...All to better prepare for emergencies.”

The FACTS® ROBD can simulate up to 30,000 foot altitudes in a safe environment to train and familiarize crewmembers with the dangerous and paralyzing effects of hypoxia. As the Hypoxia Awareness Training is administered, each crewmember is both monitored for heart rate and oxygen saturation levels, and tested for reduced visual capabilities and degraded motor and cognitive functions, any of which could lead to catastrophic consequences in flight. Experience with the effects of hypoxia and how each individual responds differently, provides the crewmember with a benchmark of their own time of useful consciousness (TUC) available to respond to an emergency, appropriately.

The ROBD is now an integral part of all scheduled FACTS Emergency Procedures Training programs and the ROBD/Hypoxia Awareness Training can also be included in FACTS On-site programs, at the client’s facilities, globally.

For further information on incorporating Hypoxia Awareness and the FACTS® ROBD into your safety management program, call FACTS® at 360/754-9805.

About FACTS Training

Since 1981, FACTS Training International has been the leading industry standard for Crewmember Emergency Procedures Training. FACTS is a unique, human factors based program designed to train pilots, flight engineers/mechanics, and corporate flight attendants in aircraft emergency evacuation and inflight safety procedures. All are practiced and simulated in the FACTS full-size, full motion cockpit and cabin emergency procedures simulator, the pool and the FACTS Underwater Egress Dunker.

FACTS designed and built the world's only mobile corporate, cockpit and cabin Aircrew Emergency Simulators. Training in the full-size simulators has capabilities unmatched in the industry and provides a realism not available anywhere else.

FACTS is internationally recognized for thorough, intensive, research-based training programs. FACTS trains over 800 crewmembers, and executive frequent flyers per year. FACTS Training is available at Training Centers around the country or at private hangars worldwide.

About AirCare Solutions Group

AirCare Solutions Group provides a wide variety of corporate aviation specific-training programs, services, and aviation safety products to private and charter operators. With our combination of aviation-specific services, AirCare Solutions Group has established itself as the one-stop-shop for corporate aviation.

Our divisions include:

AirCare™ International - Inflight emergency medical training and products

ACCESS™ Assistance - Worldwide 24/7 travel and medical assistance services

FACTS® Training - Known as the industry standard for Inflight Emergency Procedures Training for corporate flight crewmembers

AirCare Crews - Professional and contract staffing solutions for corporate aviation

ASG Interactive - Computer based aviation training

EMTA - Private and corporate safety and first aid training solutions

Quality Resources - Aviation consulting and technical writing
